Google Configuration .....	pages 28 – 29

# General Information

## Important information on Federated Login

**What is Federated Login?** – Federated Login enables your client’s users to use a single authentication token to access their PII Protect portal synced with their Microsoft 365, Okta, or Google accounts.

**Why Federated Login?** – This feature will allow *you* to control client passwords and any additional authentication methods at the Microsoft 365, Okta, and Google level, making passwords more secure and easier to manage. Additional benefits include: One less password for employees to remember meaning fewer resets and lockouts, unified password policies, and ability to enforce Multi-Factor Authentication (MFA).

**Which clients can use Federated Login?** – Any client in any product can use Federated Login. The client would need to have either a Microsoft 365, Okta, or Google G-Suite account.

## Important information on Native MFA

For clients that do not have the ability to turn on Federated Login, our native MFA features will help secure accounts. This feature is simple to activate, and the verification process is simple for users on their Authenticator application.

# Federated Login Information

## Let's Get Started!

The Federated Login setup process will differ based on Microsoft 365, Okta, or Google that the client is using.

**Microsoft 365**: If the client you are configuring Federated Login for is using **Microsoft 365**, please begin on [page 5](#).

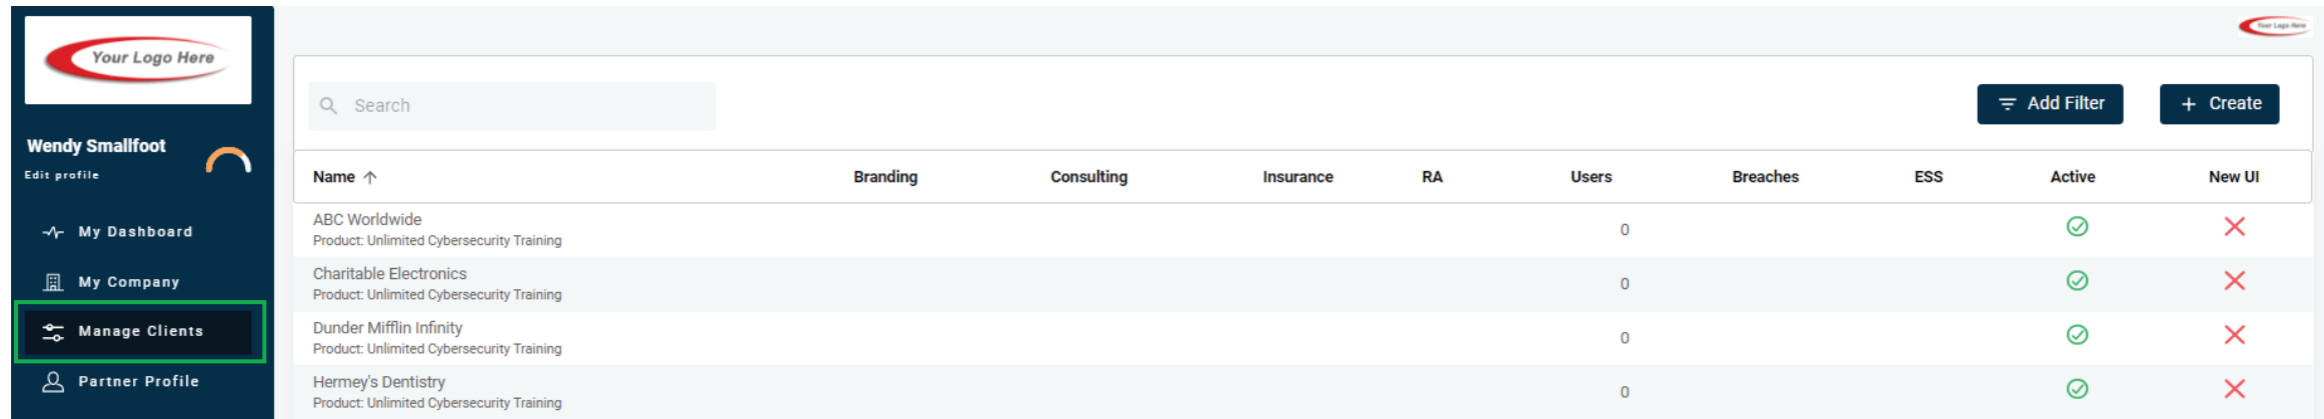

**Okta**: If the client is using Okta, please begin on [page 14](#).

**Google**: If the client you are configuring Federated Login for is using **Google**, there are no initial configuration steps. Please begin at [page 26](#). Federated Login for Google can be quickly enabled for the client within the PII Protect portal, upon the user's next login to the PII Protect portal they will be prompted to enter their Google credentials via the Google interface.

# Enabling Native Multi-Factor Authentication (MFA)

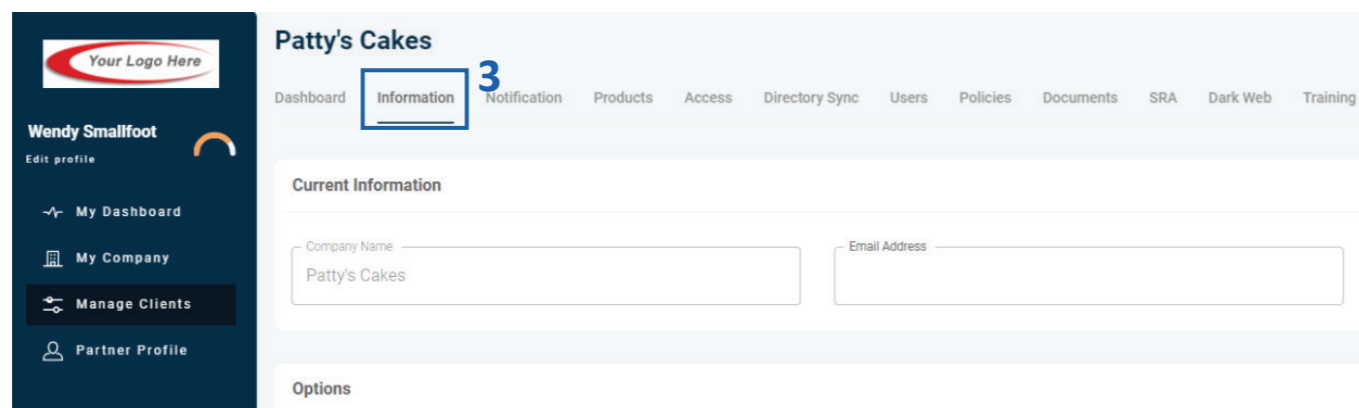

## Navigating to the Information Screen

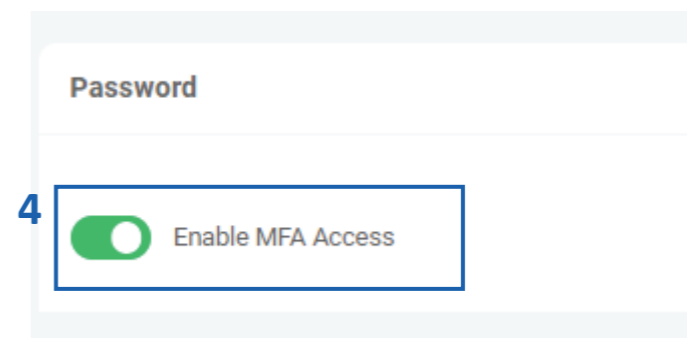

The screenshot shows the PII-Protect portal interface. On the left, a dark blue sidebar contains the user's name 'Wendy Smallfoot' and navigation options: 'My Dashboard', 'My Company', 'Manage Clients' (highlighted with a green box and a '1'), and 'Partner Profile'. The main content area features a search bar, 'Add Filter', and 'Create' buttons. Below is a table of clients with columns for Name, Branding, Consulting, Insurance, RA, Users, Breaches, ESS, Active, and New UI.

Name ↑	Branding	Consulting	Insurance	RA	Users	Breaches	ESS	Active	New UI
ABC Worldwide Product: Unlimited Cybersecurity Training					0			✓	✗
Charitable Electronics Product: Unlimited Cybersecurity Training					0			✓	✗
Dunder Mifflin Infinity Product: Unlimited Cybersecurity Training					0			✓	✗
Hermey's Dentistry Product: Unlimited Cybersecurity Training					0			✓	✗

1. Login as a Partner Administrator to the PII-Protect portal [here](#). Once logged in select “**Manage Clients**” to access your client list (above).
2. Select the client you want to enable **Microsoft 365** Federated Login for.
3. Click on the “**Information**” tab at the top
4. In the “Password” section, click the slider to turn “green” to enable MFA access for this client

The screenshot shows the 'Patty's Cakes' client information screen. The left sidebar is the same as in the previous screenshot. The main content area has a navigation bar with tabs: 'Dashboard', 'Information' (highlighted with a blue box and a '3'), 'Notification', 'Products', 'Access', 'Directory Sync', 'Users', 'Policies', 'Documents', 'SRA', 'Dark Web', and 'Training'. Below the tabs, there is a 'Current Information' section with two input fields: 'Company Name' (containing 'Patty's Cakes') and 'Email Address'. Below that is an 'Options' section.

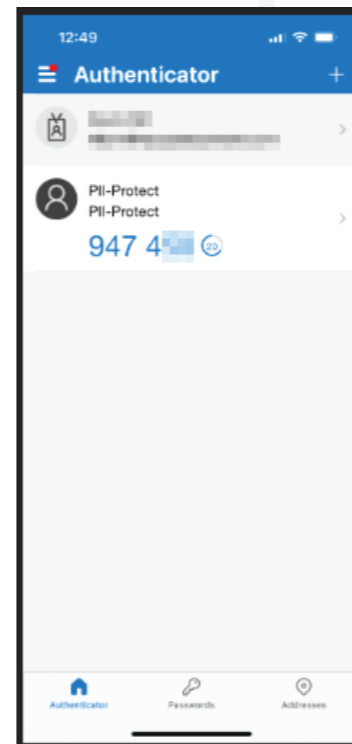

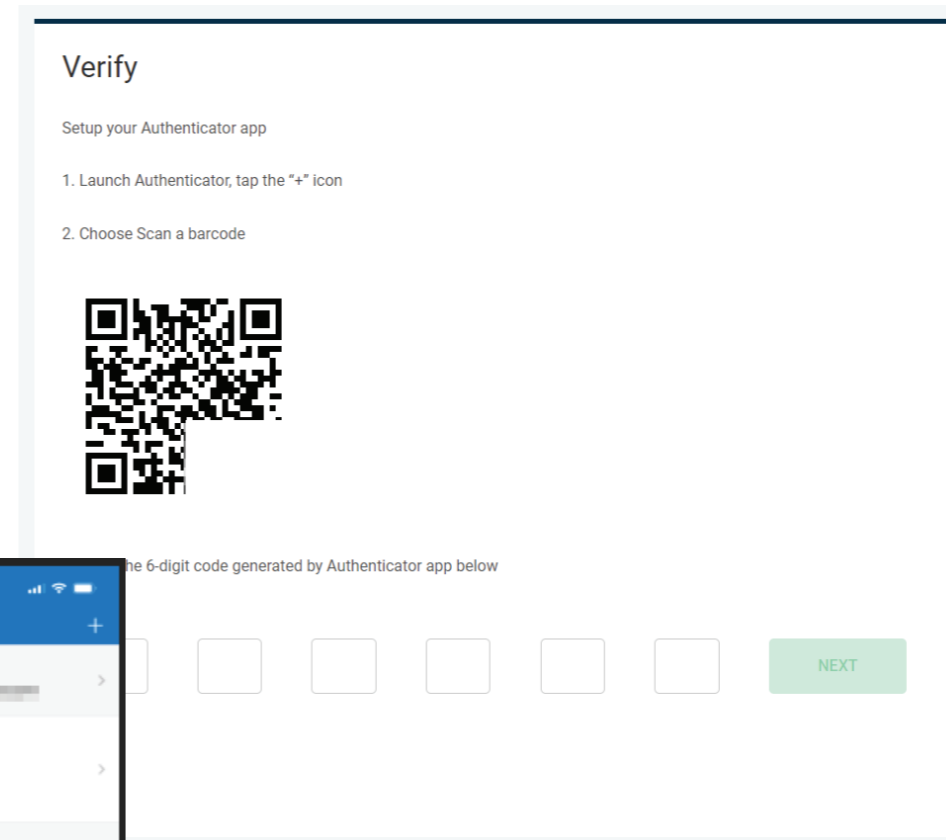

The screenshot shows a close-up of the 'Password' section. A blue box with a '4' highlights a green toggle switch labeled 'Enable MFA Access'.

# Enabling Native Multi-Factor Authentication (MFA)

## Client Verification Process with MFA

Client MFA is now enabled! Upon the next login for users within this Client, a verification page will be shown. Users should open their Authenticator Application to add PII Protect as a new account. A scannable QR code will be presented and once scanned will provide a unique passcode to enter back on the PII Protect portal verification page.

For future login attempts, after entering their email address and password, users can retrieve their passcode within their Authenticator app.

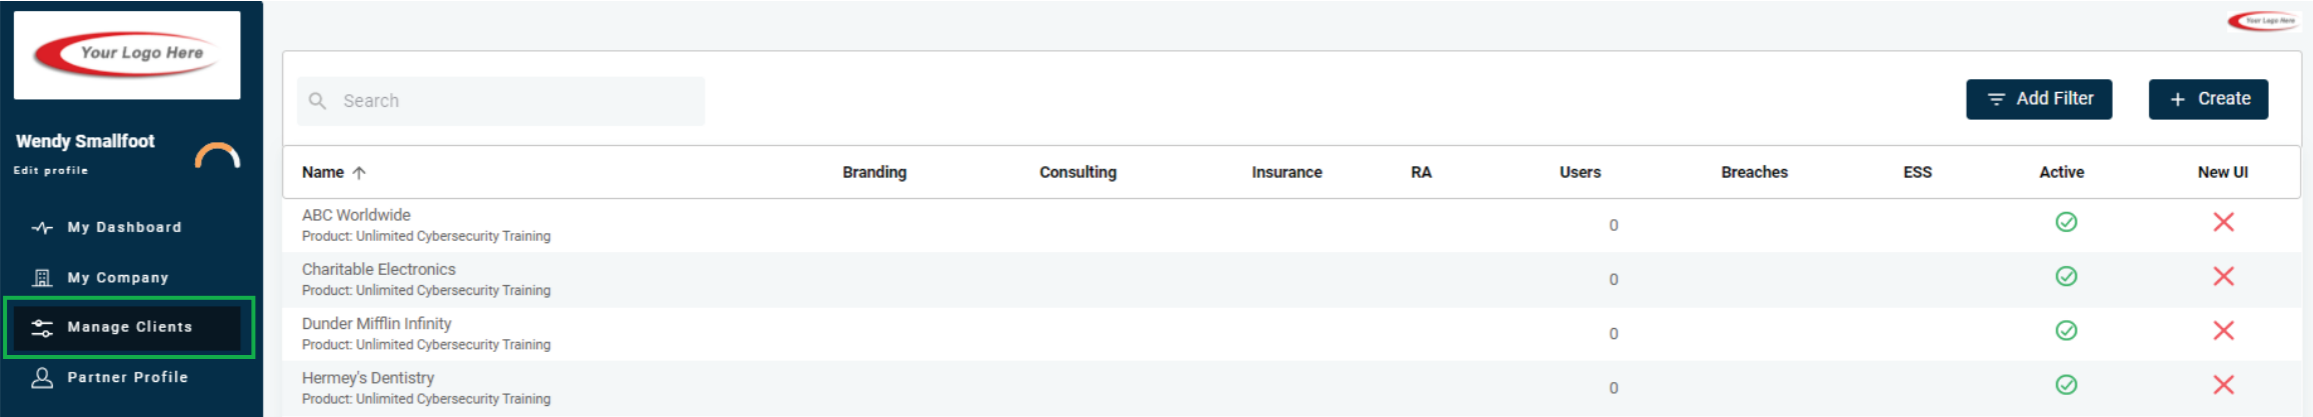

**Note:** Native MFA provides additional security protections, but Federated Login options generally provide a more preferred security solution.

# Configuring Federated Login Within the PII Protect Portal – Microsoft 365

## Navigating to the Client View Screen

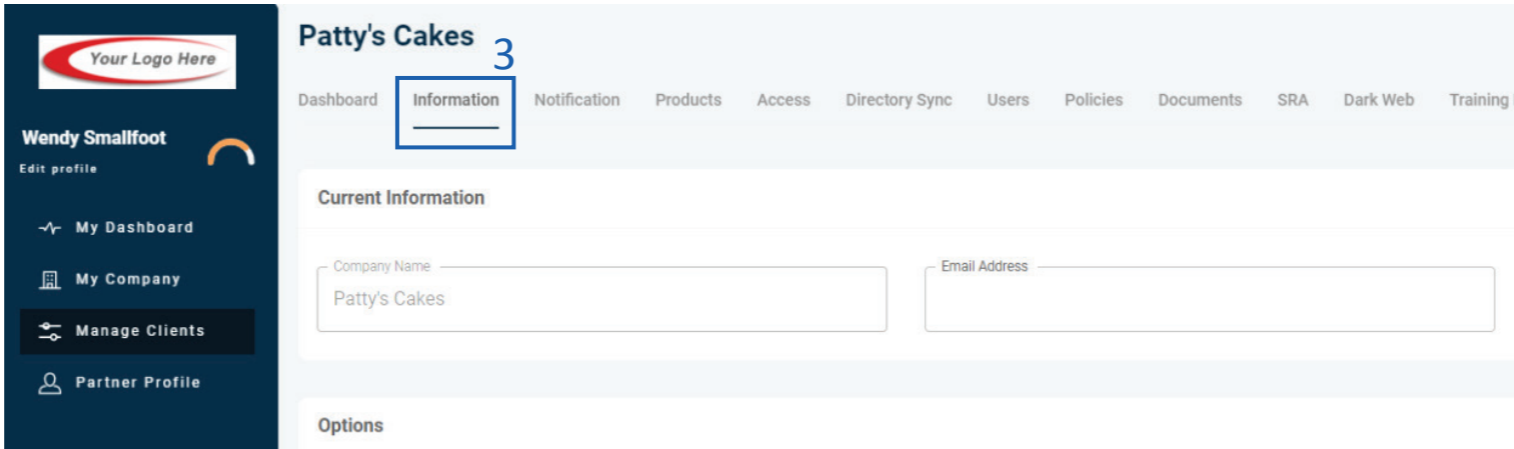

1

The screenshot shows the PII Protect portal interface. On the left, a dark blue sidebar contains the user profile 'Wendy Smallfoot' and navigation options: 'My Dashboard', 'My Company', 'Manage Clients' (highlighted with a green box and a blue '1'), and 'Partner Profile'. The main content area features a search bar, 'Add Filter', and 'Create' buttons. Below is a table with columns: Name, Branding, Consulting, Insurance, RA, Users, Breaches, ESS, Active, and New UI. The table lists four clients: ABC Worldwide, Charitable Electronics, Dunder Mifflin Infinity, and Hermey's Dentistry, all with 0 users and active status.

Name ↑	Branding	Consulting	Insurance	RA	Users	Breaches	ESS	Active	New UI
ABC Worldwide Product: Unlimited Cybersecurity Training					0			✓	✗
Charitable Electronics Product: Unlimited Cybersecurity Training					0			✓	✗
Dunder Mifflin Infinity Product: Unlimited Cybersecurity Training					0			✓	✗
Hermey's Dentistry Product: Unlimited Cybersecurity Training					0			✓	✗

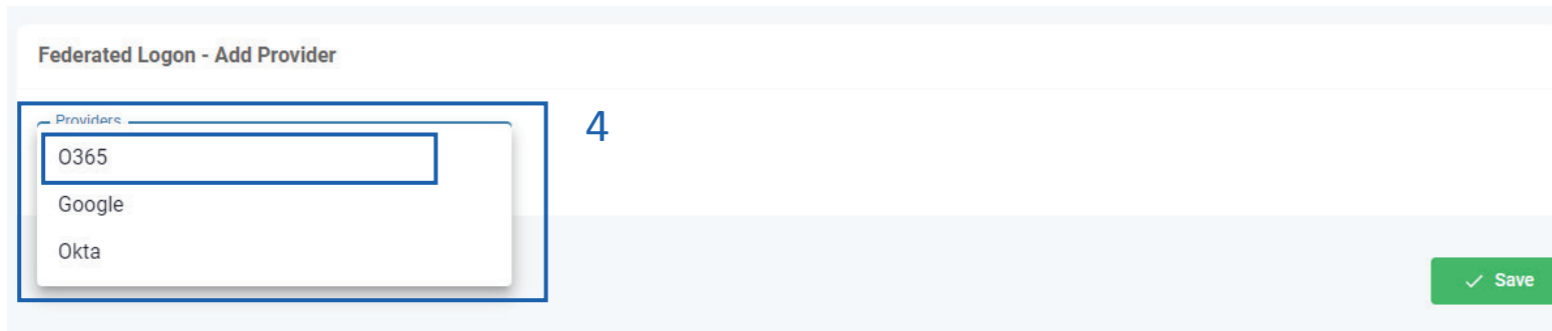

1. Login as a Partner Administrator to the PII-Protect portal [here](#). Once logged in select “**Manage Clients**” to access your client list (above).
2. Select the client you want to enable Microsoft 365 Federated Login for.
3. Click on the “**Information**” tab at the top

The screenshot shows the 'Information' tab for a client named 'Patty's Cakes'. The sidebar on the left is the same as in the previous screenshot. The main content area has a navigation bar with tabs: 'Dashboard', 'Information' (highlighted with a blue box and a blue '3'), 'Notification', 'Products', 'Access', 'Directory Sync', 'Users', 'Policies', 'Documents', 'SRA', 'Dark Web', and 'Training F'. Below the navigation bar, the 'Current Information' section contains two input fields: 'Company Name' (with the value 'Patty's Cakes') and 'Email Address'. The 'Options' section is partially visible at the bottom.

# Configuring Settings in the Azure Admin Center

## Setup in Azure Active Directory Admin Center

The screenshot shows the Azure Active Directory Admin Center interface. The left-hand navigation pane is visible, with 'Azure Active Directory' highlighted by a yellow box and labeled with the number 8. Below it, 'App registrations' is also highlighted by a yellow box and labeled with the number 9. In the main content area, the 'App registrations' page is displayed, and the '+ New registration' button is highlighted by a yellow box and labeled with the number 10. The main content area shows a table of owned applications with columns for Display name, Application (client) ID, Created on, and Certificates & secrets. The table contains three rows of data, with the first two rows having red and purple icons respectively, and the third row having a purple icon.

Display name	Application (client) ID	Created on	Certificates & secrets
[REDACTED]	[REDACTED]	12/17/2020	-
