

# Advanced Email Protector

## User-Friendly Encrypted Email. No Apps or Plugins.

### Low Maintenance

Simple sign-in emails you a secure, expiring link, No more lost passwords!

### Unrivald Flexibility

Send encrypted email from any email app on any device... even with attachments.

### High Security

Messages are encrypted using AES256 standards & geographically distributed keys.

Advanced Email Protector allows users to securely send encrypted email containing corporate and financial data, personal info, legal docs, and medical records without additional plugins or apps. It allows users to send encrypted email from any email client including iPhone, Android, Windows, Linux or PC. This solution is built on a distributed, multi-layer AES256 encryption design with automatic key rotation. By default, messages expire in 1 year, but users can set any message to expire sooner as needed.

Advanced Email Protector also provides seamless archive integration which allows users to automatically have data securely journaled to an archive. Users can enable the optional 'Export to Inbox' feature which allows for instant and secure transfer of messages to the normal email box.

## Features

**Secure Sign In without a Password** - Simply request to sign in using your email address, then click the secure link from your inbox (the same way password resets are handled most of the time). Advanced Email Protector bakes in extra security so its actually more secure than password logins.

**Expiring, one-time-use links** - Bracket sign-in links expire 15 minutes after being delivered. In addition, each sign-in link only works once, so you never have to worry about someone rummaging through your inbox and opening old links.

**Geolocation of sign-in requests** - As an additional layer of security, sign-in request notifications also include the requesting device IP and approximate location.

**Advanced device fingerprinting** - Sign-in links will only work from the device that originally requested access. If a different device attempts to sign in, the link is invalidated and the session is blocked.

**Personal Data Keys** - Gives users ultimate control of their encrypted message data. When enabled, all messages are encrypted in a way which requires the personal data key to decrypt the data. The Personal Data Key is never stored in Advanced Email Protector.

## Bracket Share

- **Secure File Transfer** - Included with Advanced Email Protector is encrypted file transfer service, Bracket Share. This gives every Advanced Email Protector user their own personalized file transfer page with an easy URL they can give to anyone. Shared files and messages show up in the Advanced Email Protector inbox just like a regular message.
- **Customizable link** - Advanced Email Protector Share links are customizable, so users can make them easy to remember and share.
- **Personalized invites** - Users can have Advanced Email Protector email people an invitation to share. These can display your personalized profile, so your contacts feel more confident about sharing their sensitive data. Anyone with your Share link can share encrypted files and messages anytime with no account required.
- **Sender Validation** - Senders who share through the Share link are securely validated via inbox authentication to prevent abuse.

## Large File Transfer

Don't worry about bounced emails with large attachments. Advanced Email Protector can handle files up to 1GB in size with up to 25 files allowed per message. Large files are good to go when sending from Advanced Email Protectors webmail interface or Advanced Email Protector Share.
