CYBERSECURITY SOLUTIONS OVERVIEW

ThreatProtector Cybersecurity Solutions provide your business with the protection, visibility and peace-of-mind for your biggest cybersecurity challenges.

Cyber attacks have increased over 50% in the past year, and a single breach costs businesses $200,000 on average, with many unable to recover after an attack.

The best defense of these threats is a strong offense. Ongoing employee cybersecurity awareness training and proactive device protection are critical aspects in building a strong security posture for your business.

No matter how large or small your company is, you rely on the internet for your business's critical operations. ThreatProtector, our cybersecurity solutions portfolio focuses on providing IT security solutions customized to meet the needs of your business.

Today's cyber threats require equally advanced security strategies that continuously adapt to overcome new and evolving security risks and vulnerabilities. To protect your business-critical operations and its valuable information assets, adopting a comprehensive, layered-security defense is essential, but implementing and effectively managing the security operations for your business can be challenging without the proper resources.

We focus on providing user-friendly, engaging, and informative programs in cybersecurity awareness training, full-stack email protection, advanced endpoint protection, and a complete Managed Security Operations Center (SOC), to ensure your business is protected from rapidly growing and advancing cyber threats.

Security Awareness Employee Education
92% of all data breaches happen because of an untrained employee. Our Security Awareness Training platform uses innovative cybersecurity training methods, dark web monitoring, phishing simulations, and yearly NIST security audits to build your employees from the weakest link to the strongest defense.

Advanced Email Protection
Advanced Email Protection offers accurate email filtering with icon-based scoring indicators for clear communication of email safety levels. It provides detailed analytics to help users understand why an email was held and assess sender trustworthiness. The service empowers users to create and customize filtering rules manually, from templates, or through regular expressions. It distinguishes between unwanted and legitimate emails, holding potentially harmful or policy-violating messages for user review while allowing good emails to pass through, enhancing email security. It addresses the issue of false-positive handling in Microsoft 365, reducing the chance of important messages going missing.

Superior Endpoint Security
Our PC Matic EndPoint solution takes a fundamentally different approach to endpoint security with our exclusive Automated Global Whitelist technology. Only 'trusted' applications are allowed to run on the endpoint providing a significantly better security solution than traditional anti-virus products. Additional features include industry-leading ransomware prevention, fileless malware protection, detailed alerting and reporting, and RDP Brute Force security. Set up and manage thousands of devices centrally from a single pane of glass and deliver the right security to the right people in real time.

Managed Security Operations Center (SOC)
Our Managed Security Operations Center solution combines the power of people, processes, and technology to provide essential security capabilities like real-time threat and intrusion detection, rapid incident response and investigations, and continuous 24/7 monitoring and vulnerability management. Take advantage of our team of seasoned cybersecurity professionals and expert analysts to empower your business to overcome today's top cybersecurity challenges and implement a more proactive and preventative approach to protecting your business.
