

CYBERSECURITY CONSULTING SOLUTIONS OVERVIEW

Telesystem's cybersecurity consulting services are designed to help your organization improve your security posture and navigate the path to cyber resilience.

Today's cyber threats require an equally advanced security roadmap to overcome new and evolving security risks and vulnerabilities. Telesystem's cybersecurity experts are here to help safeguard your business-critical operations and valuable information to stay a step ahead of cyber criminals.

Gain peace of mind about your organization's security readiness and compliances despite the ever-evolving cyber threat landscape. Telesystem's cybersecurity experts will start by understanding your goals and evaluating your threat environment, then dig deeper to help your business identify internal and external vulnerabilities and explore additional security needs and certifications which may be necessary for your business.

Cybersecurity Assessment

In less than 1 hour, receive a 360-degree picture of your overall network environment that assigns a risk score and remediation recommendations to every aspect of your organization's IT network, SQL Servers, Security, Exchange instances, and Microsoft 365 use.

Vulnerability Management

Automated vulnerability scanning identifies rogue internal and external entry points within your network and sends alerts to help your business identify and eliminate weaknesses and security gaps before they're exploited.

Compliance as a Service (CaaS)

Ongoing monitoring and audits to accomplish and maintain compliance with multiple global regulations such as HIPAA, GDPR, NIST-CSF or CMMC, and managing due care for your cyber liability insurance requirements.

Security Information & Event Management (SIEM) as a Service

Protect your IT network against internal cybersecurity threats. Our advanced internal threat detection solution combines machine learning and intelligent tagging to identify anomalous activity, suspicious changes and threats caused by mis-configurations.

Pen Testing as a Service (PTaaS)

Internal and external penetration testing and simulated attacks expose vulnerabilities and weak points within your system that could jeopardize your data. The findings are documented in a vulnerability report including actionable remediation guidance.

vCISO

Gain access to a fully-qualified subject matter expert to help your business identify and implement cybersecurity measures such as IT processes and policies, security roadmaps, incident response planning, security architecture, and risk management.
